Etihad gets financial plan Rocket from Miagen

Irish financial analysis software firm Miagen has been signed by Etihad Airways to help the national carrier develop and model its five-year plan for growth through the use of Miagen's integration product Rocket.

Miagen specialises in the design and implementation of industry-specific models to solve complex financial planning needs. The solution integrates financial and non-financial data from different sources into a single reporting system, for better decisions and management.

Geotab finds host for GPS Tracking System in eHDF

Fleet management service provider Geotab Middle East has signed eHosting DataFort to deliver a fully managed hosting service for its GPS Tracking System.

The deal provides local hosting which ensures low latency for the GPS application, so that it is able to offer nearly live fleet data. Geotab's fleet management service manages 400,000 vehicles worldwide, measuring GPS data and trip activity, sending the information back to a server via GPRS. The company is seeing growing demand across the GCC.

OTEC gets Microsoft to improve IT management

Oman Electricity Transmission Company (OTEC) has implemented Microsoft System Centre Service Manager, Operation Manager and Configuration Manager 2012, to create a comprehensive management platform to more easily and efficiently manage its IT environments, including server infrastructure, private and public clouds and client devices.

The implementation was carried out by service provider Infoline, and is the first implementation of System Centre Service Manager 2012 with a bilingual interface.

DEPLOYMENT

A regional enterprise project at a glance

User: Imdaad

Project: Fleet tracking and management

The product: Dubai Technologies' FleetMAN

The objective: Track and manage complete fleet of vehicles for facilities management company Imdaad, through the complete lifecycle.

What they said: Jamal Lootah, CEO, Imdaad: "Aside from keeping a track on the maintenance and fuel of the fleet, FleetMAN also keeps a check on the reckless or wayward drivers. The software is synchronized with GPS tracking devices on fleets to produce analytical reports, which can be very useful during service reassessment."
