

eHDF to provide 'Cloud' Backup and Recovery Services

eHostingDataFort (eHDF), the UAE's leading provider of managed IT services, has been appointed by IT security company Paramount to provide a 'cloud safe' solution for its growing list of customers.

Providing high-end servers, with a storage capacity in excess of 12 terabytes (TB), eHDF will complement the data backup needs of Paramount's existing clientele, as well as invite potential customers to invest in backup and recovery from the cloud.

Paramount is one of the fastest growing SMEs in the UAE, helping businesses to monitor and mitigate risks in IT infrastructure. The move to deploy eHDF's services will allow Paramount to offer its clients cloud-based disk storage for data back-up, which is more efficient than the traditional method of using tapes.

Yasser Zeineldin, CEO at eHostingDataFort, said: "SMEs in the UAE and the Gulf region are huge contributors to the regional economy. They are becoming significantly more sophisticated in their business strategy and are investing in the latest technologically advanced systems and processes. Our hosting platform offers a unique 'cloud safe' solution to companies that seek to build and expand on their existing business."
