

GITEX PREVIEW 2013

**WITH THOUSANDS OF COMPANIES EXHIBITING AT
GITEX TECHNOLOGY WEEK 2013, WE PICKED SOME OF THE
TOP NETWORKING AND NETWORKING SECURITY VENDORS THAT
WILL BE DISPLAYING THEIR WARES THIS YEAR**

eHDF delivers cloud value

Data centre services provider eHosting DataFort (eHDF) will be promoting its managed hosting and cloud hosting services at this year's Gitex Technology-Week 2013.

eHDF, which also offers disaster recovery and business continuity services, managed co-location and co-location services, will highlight the benefit of using these services during the show. The company reports increasing demand for cloud and managed hosting, and says that Gitex provides a high return on investment by creating specific segments to enable it to meet its core target audience, clients and potential clients.

"Gitex is a good platform to raise awareness about our cloud services among potential customers. Clients will get a better understanding of our cloud solutions and learn more on our upcoming projects. Our team present at the

exhibition will be able to provide first-hand information on these services," said Yasser Zeineldin, CEO of eHDF.

eHDF has seen growing demand for cloud services, as companies look to access knowledge, technical expertise and technological innovations from a local provider, with a predictable cost model.

Telco testing from Prologix

Prologix Distribution is set to demonstrate its RF capabilities, particularly in the areas of RF testing and measurement, at Gitex Technology Week.

The IT and telecom systems integrator will exhibit products from over

“The benefit for our partners and customers is that Prologix is a single source provider of a comprehensive portfolio of both optical and RF solutions.”

Aditya Sahaya, director, Sales, Prologix LLC

12 of its vendor partners and will also use the platform as an opportunity to highlight its service capabilities which include test equipment rental, benchmarking, in-building solutions, EMF testing, passive intermodulation testing, network synchronisation audits, transmission planning, professional telecom training and IT managed services. These services compliment the company's range of RF solutions for regional telcos. These include test and measurement equipments, high capacity microwave for back-haul, test equipments for optical and RF, protocol analysers, active and passive network monitoring, indoor wireless access, and outdoor wireless- point-to-point and point-to-multipoint wireless solutions in the frequency range starting from 400MHz and up to 80GHz and RF drive test equipment.

Intergence focuses on services

IT consulting and professional services company Intergence will focus on its core activities, IT optimisation consulting, managed sourcing and managed services during Gitex Technology Week 2013. Intergence provides consulting and professional services, delivered by experienced IT professionals, all of which are underpinned by robust and market-proven methodologies. Intergence services are designed to allow clients to extract greater value from existing assets and with the company's high quality technical consulting expertise providing support to in-house IT capabilities. Intergence has achieved considerable success in the Middle East through the quality and experience of its consultants and support staff and the company is continuing to attract exceptional staff, who have a proven track record of delivering IT excellence, and Intergence is adding to its extensive pool of expertise in several enterprise technology areas.

↑ Peter Job from Intergence says that the company has achieved considerable success in the region.
